RE: Shopify Dev Degree - 2021

Dear Recruiting Team,

It is with great interest that I submit my cover letter and resume in response to your exciting opportunity as a Shopify Dev Degree student which was advertised on the York University website. I am eager to learn and use my experience to support the next major revolution in computing. Dev Degree will help me to learn more as my Shopify job will be developing and implementing the newly gained skills on regular basis. After completion in addition to my wealth of knowledge, will demonstrate superior analytical and troubleshooting skills as a Computer Programmer.

Learning while adapting to a fast-changing world is an important task as while studying automation and robotics in Centennial college, I had a part-time job from which I used to live on my own. Learning new things every day is fun but the will to put the time to overcome obstacles and improve is equally important to me. While doing robotics, I found out I love programming and the world needs good programmers. Job related to the field of study is important as it helps to try and test the importance of skill in the real world. Working while studying in university can have a great amount of mental pressure and I know how to manage it and the importance of side job as I have done it before.

Nowadays many online tools can help to become a computer scientist but the importance of a degree and good guidance from the best innovative company team as Shopify is very important. I just want to convey that I am a fast learner and work hard to become the best. Just need a chance to prove myself and I think you can give me that and in return, I can promise to deliver the best of myself. Strive to keep update with the fast pace of the technology on a wide variety of platforms and continuously learning new coding practices and software. Also, a highly detailed oriented, I believe that have enabled me to accomplish all set of commitments.

I am ready to take risks, step outside my comfort zone to come up with creative ideas and you can count on me to get the job done with the commitment of giving 100%. I know the benefits of a team and can develop positive work relationships with a team member to communicate the ideas honestly and clearly and respect the views and opinions of others on the team.

I believe I have the capabilities and skills for the role of Dev Degree Student and will contribute positively to the growth of your company while and after completing university. Thank you for taking the time to consider my application. I look forward to meeting you to discuss my suitability further and you can call at (647) 549 1352 or email me at pranavgupta0001@gmail.com.

Best regards,
Pranav Gupta
